

HALF THE MONEY
YOU SPEND
ON POWER

**FLIES
OUT THE
WINDOW!**

VALUE YOUR POWER

VIRGINIA ENERGY SENSE

**CURTAINS CAN
CURTAIL YOUR POWER
CONSUMPTION**

In the winter, open up your curtains and let that natural sunlight in to help keep your house warm and comfortable. In warmer

months, keep your curtains closed during the day to keep things cool.

Your heating and cooling system is designed to circulate air throughout the house, but when your house leaks it is like throwing money out the window.

**DON'T GO
WITH
THE FLOW**

According to the Department of Energy, the average home loses 10-20% of the energy used to heat and cool air because of leaks.

**NO ONE LIKES
A DRAFTY HOUSE,
RIGHT?**

Caulking gaps and cracks around doors and windows, or using weather stripping materials can cut your energy bill by as much as 20%.
